Preliminary Planning Sheet for a Science Task

Title of Task: <u>How Strong is Your Electromagnet</u>

Exemplars[®] K-We Set the Standards

Scientific Concepts and Content	Scientific Procedures	Tools and Technologies
 Electrical Circuits (current travels through a complete or closed circuit) Electromagnetism (current moves through a wire and nail creating a temporary magnetic force) Physical properties of magnetic and non-magnetic materials Magnets have an invisible force field The more current put through a circuit, the greater the amount of magnetism created 	 Observation skills Making predictions/hypotheses Understanding cause and effect Collect, record and interpret data Control variables Draw conclusions Ask questions 	 Constructs an electromagnet using a nail, wire, and battery (ies) Coils the wire around the nail tightly so that magnetism is generated
Scientific Representation and Notation (Communication)	Possible Solutions	Related Tasks
 Data chart/table with title and labels Data recorded in chart 	 Electromagnet works and attracts a number of paper clips Testing and data chart/table is complete and organized Conclusions are accurate and relevant 	 Learning about Magnetism: Part 1 and 2 How Powerful is a Magnet? Can You Light the Bulb Can You Get 2 Light Bulbs to Light? Learning about Electricity: Part 1 and 2
